We put intelligence on your factory floor.

AI systems, live monitoring, and software built for real industrial floors.

— Proven on production lines across automotive, oil & gas, and textile manufacturing.

Representative live telemetry — machine to web dashboard.

Selected Work

A sample of systems we've designed, built, and deployed

CLIENT — FOTCO

AI-Based Gate Entry System

Vision-based recognition automated vehicle and personnel entry, replacing the manual gate register.

CLIENT — KIA MOTORS

Blower Testing Machine

Automated HVAC blower test rig on the assembly line, capturing RPM, airflow, and pass/fail data live.

CLIENT — FTTL · OIL & GAS

Tank Management System

Real-time monitoring and management of tank operations for an oil & gas facility.

INDUSTRY — TEXTILE

AI Width Monitoring System

Computer vision tracks material width live on the production line to catch deviation before scrap.
