LIVE DEPLOYMENT

Dawn Converter

The Challenge

Maintenance work orders were tracked manually across paper logs and phone calls — there was no accountability for who raised, assigned, or closed a job, and spare parts usage went unrecorded, leading to stock-outs and repeated downtime.

The Approach

Industronics Engineering deployed CMMS — a structured work order workflow (User → Engineer → Technician → Review → Manager Close), integrated with the plant's SCADA system, inventory tracking, and role-based access control.

The Result

Every work order is now tracked end-to-end with full accountability, parts usage is logged automatically, and plant managers get live visibility into machine health, energy use, and maintenance performance.

Work Order Lifecycle

1. **Work Order Creation — A user creates a maintenance work order.**
2. **Engineer Assignment — The work order is assigned to an engineer.**
3. **Technician Assignment — The engineer reviews the issue and assigns it to a technician.**
4. Technician Response — Accept, Reject, or Hold (if parts/resources are unavailable).
5. **Task Completion — Technician marks the work order as Completed.**
6. Engineer Review — Approves if satisfactory, or rejects and returns to the technician.
7. User Verification — Approves and forwards to Manager, or returns to Engineer for revision.
8. **Final Closure — Manager closes the work order.**

Rejected — back to Technician

Needs revision — back to Engineer

Dashed arrows = revision loops until the user is satisfied. Once verified, the Manager closes the order.

Reports

01 Parts Utilization Report

Displays spare part usage history with related work order details.

02 Work Order Date-wise Report

Displays all work orders created within a selected date range.

03 Work Order Time Elapsed Report

Displays time spent at each workflow stage and total completion time.

04 Work Order Spare Parts Summary Report

Summarizes spare parts used within a selected date range.

05 Work Hours Report

Displays technician working hours and overtime (OT).

SYSTEM FOUNDATION

Core Modules

01 User Management

Create and manage system users across all roles.

02 Role-Based Access Control (RBAC)

Role-based permissions ensuring each user only accesses what they need.

03 Spare Parts Management

Track and manage spare parts used in maintenance work.

04 Department Management

Organize work orders and staff by department.

05 Shift Management

Manage technician and staff shift schedules.

06 Employee Management

Maintain employee profiles and work history.

07 Category Management

Classify work orders and assets by category.

LIVE MONITORING

Monitoring Dashboards

Dawn Machine Monitoring Dashboard

- Operating Mode
- Machine Speed
- Power Consumption (kW)
- Running / Stopped Status

Energy Monitoring Dashboard

- Speed
- Power Consumption (kW)
- Energy Consumption (kWh)
- Machine Connection Status
- Main Distribution Board (D.B.) Monitoring

ACCESS BY ROLE

Role-Based Dashboard Overview

Admin Dashboard

Full system access. Manages users, departments, reports, work orders, and settings.

Engineer Dashboard

Assigns technicians, reviews completed work, and approves or returns work orders.

Technician Dashboard

Views assigned work orders, updates progress, records spare parts and work hours, and submits completed work.

User Dashboard

Creates maintenance requests, tracks work order status, and approves or returns completed work.

Manager Dashboard

Performs final approval and closes completed work orders.

WHY CHOOSE US

Why Choose Industronics Engineering

1. **Proven Track Record**

   Live deployments across 10+ industrial sites in textile, food, and energy sectors.

2. **End-to-End System Design**

   From work order automation to full SCADA integration, built and delivered in-house.

3. **Real-Time Monitoring Expertise**

   Deep experience across OEE, energy, machine, and now maintenance monitoring.

4. **Dedicated Engineering Support**

   Ongoing support after deployment — not just a one-time installation.

5. **Fully Customizable Workflows**

   CMMS adapts to your plant's real approval chain and reporting needs.

Want CMMS at Your Site?

If you'd like this solution deployed on your site, feel free to reach out — we're happy to walk you through it.
