INDUSTRONICS ENGINEERING

Warehouse Solutions

Warehouse Management System

WMS

Real-time inventory control, smarter picking, and full warehouse visibility — engineered and integrated end-to-end by Industronics Engineering.

info@industronics.uk | pm.sd@industronics.uk

One system that runs your entire warehouse floor

A WMS replaces spreadsheets and guesswork with a single, real-time source of truth — from the moment stock arrives to the moment it ships.

Real-Time Inventory

Every SKU tracked live, by location, quantity and status — no more manual stock checks.

Smart Put-Away & Slotting

Incoming goods directed to the optimal location based on velocity, size and demand.

Pick, Pack & Ship

Optimized pick paths and wave planning that cut travel time and order errors.

Replenishment & Counting

Automatic replenishment triggers and cycle counts keep stock accurate without shutdowns.

Barcode / RFID Capture

Every movement scanned and logged automatically — no re-keying, no lost data.

Reporting & Analytics

Live dashboards on throughput, accuracy and labor — visible to management in real time.

The intelligence layer of your warehouse

Your WMS sits between business systems and the warehouse floor — directing every movement and keeping both sides in sync.

Delivered as part of a full-stack build — or integrated standalone with your existing automation.

Why Industronics delivers your WMS

One EPC partner for hardware, controls and software — no gaps, no finger-pointing between vendors.

Single EPC Contractor

Your WMS, controls and automation built and supported under one roof.

ISO-Certified Delivery

9001, 14001 & 45001 certified — quality and safety built into every rollout.

In-House Software Team

RFID/barcode, AI vision and ERP integration (SAP/Oracle) built internally.

Proven Reference Project

A full WCS + WMS + WES build delivered end-to-end for a UK warehouse.
