Warehouse Automation & Software Solutions

WMS PROPOSAL

# Your Own Warehouse Management System

Stop paying monthly for a WMS you'll never own. We design, build, and hand over a system that's fully yours — no license fees, no vendor lock-in.

**$0**
Monthly License Fees

**100%**
Source Code Ownership

**1**
Team, End-to-End

TODAY'S DISCUSSION

# What We'll Cover

A straightforward case for building your own WMS instead of renting one — and how we'd deliver it.

01 **The Cost of Renting**

What you're really paying for with a third-party WMS subscription

02 **Rent vs. Own**

A side-by-side cost and capability comparison

03 **What We'll Build**

The modules and features of your custom WMS

04 **Proven Delivery**

A live reference project — WMS delivered end-to-end

05 **Why Industronics**

One EPC partner for hardware, controls & software

THE PROBLEM

# The Hidden Cost of a Rented WMS

Third-party WMS platforms look simple to start — the real cost shows up over time.

### Recurring Fees, Forever

Monthly or annual license fees that never stop — and typically rise every renewal.

### Per-User Pricing

Costs scale with every new user, warehouse, or module you switch on.

### Limited Customization

Workflows are built for the vendor's average customer, not your operation.

### Your Data, Their Servers

Inventory and operational data lives on a platform you don't control.

### Integration Fees

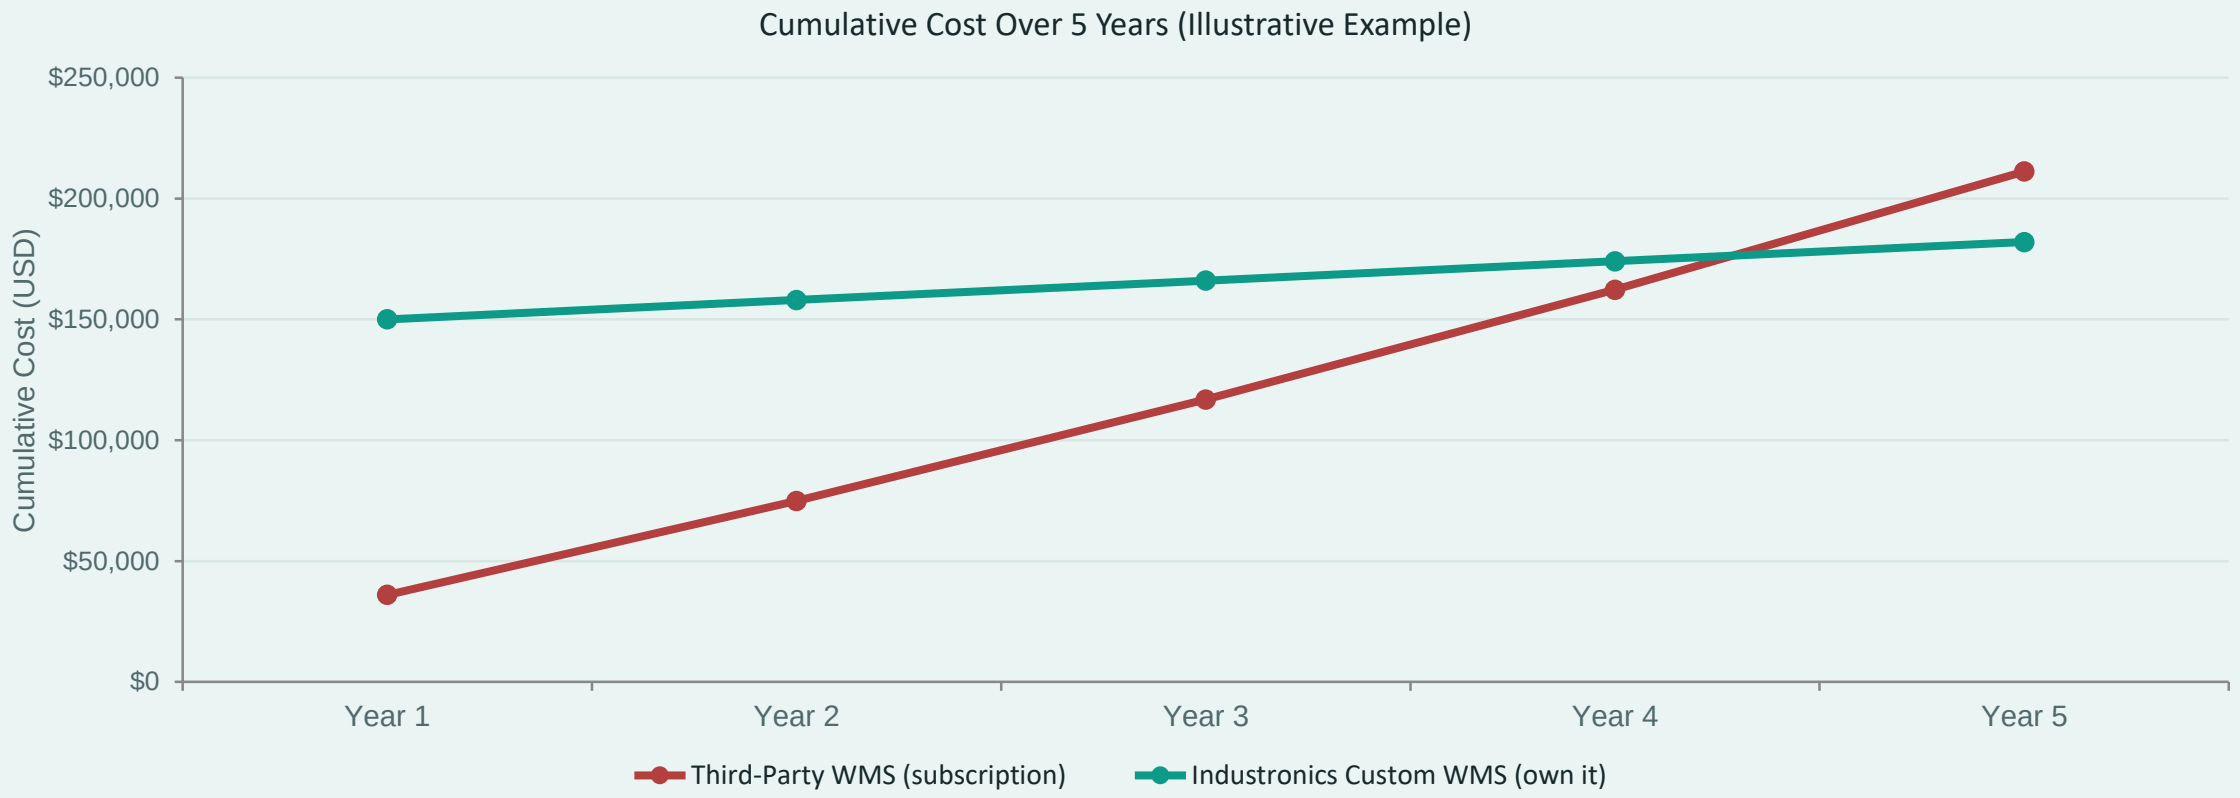

Connecting to your ERP, ASRS, or WCS often means extra setup and API charges.

### Vendor Lock-In

Switching providers later means re-implementation, migration risk, and downtime.

THE REAL COST

# Own It Once vs. Pay Forever

*Illustrative example based on a typical mid-size warehouse SaaS WMS (~$3,000/month, 8% annual increases) vs. a one-time custom build plus optional annual support. Actual figures depend on your requirements — we're happy to prepare a tailored estimate.*

SIDE BY SIDE

# Rent vs. Own

| | Third-Party WMS | Industronics Custom WMS |
|---|---|---|
| **Cost Structure** | Recurring monthly/annual fees that scale with usage | One-time build cost — no recurring license fee |
| **Customization** | Limited to the vendor's configuration options | Built entirely around your workflows |
| **Data Ownership** | Hosted on the vendor's servers | You own the data, hosted where you choose |
| **Source Code** | Never provided | Fully delivered — it's yours |
| **ERP / ASRS / WCS Integration** | Extra cost, third-party APIs | Native integration, built by the same team as your automation |
| **Long-Term Cost** | Rises every renewal, forever | Flat after the initial investment |
| **Vendor Lock-In** | Migration risk if you switch providers | No lock-in — the system is yours to keep |

THE DELIVERABLE

# What We'll Build For You

A complete Warehouse Management System, engineered around how your facility actually operates.

### Inventory & Stock Management

Real-time stock visibility across every location

### Receiving & Putaway

Structured intake with configurable putaway logic

### Barcode & RFID Scanning

Fast, accurate picking and stock movement

### Dispatch & Shipping

Order consolidation, staging & outbound tracking

### Real-Time Reporting

Live dashboards for throughput, accuracy & labor

### Role-Based Access Control

Permissions matched to your team's structure

### ERP / WCS / WES Integration

Native connections — no third-party middleware

### Multi-Warehouse & Zone Management

One system across every site and storage zone

PROVEN DELIVERY

# We've Already Built One

Our UK warehouse automation project included a complete WMS — designed, coded, and commissioned in-house alongside the WCS and WES.

- WCS + WMS + WES delivered end-to-end, by one team
- Full 3D flow design & simulation before a line of code was written
- Same in-house software team that would build your system

*3D Warehouse Flow Design & Simulation — actual project render*

THE PROCESS

# How We'll Get There

A clear, structured delivery path — the same process behind our UK reference project.

1

### Needs & Workflow Assessment

Understand your operation, throughput & pain points

2

### System Design & Data Modeling

Map your warehouse logic into the system architecture

3

### Development & Configuration

Build the WMS around your confirmed workflows

4

### Integration & Testing

Connect to your ERP, ASRS & WCS; validate end-to-end

5

### Deployment & Training

Go live on-site, with your team trained and supported

6

### Ongoing Support (Optional)

Available if you want it — never a requirement

WHY INDUSTRONICS

# A Partner Who Delivers End-to-End

### Multi-Country Delivery

Live projects across UK, Pakistan, Bangladesh & Egypt

### ISO-Certified Quality

9001, 14001 & 45001 certified — built-in quality & safety

### Single EPC Contractor

Hardware, controls & software under one roof — no gaps

### In-House Software Team

The same team also builds SCADA, ASRS controls & ERP links

# Let's Build It — Not Rent It

We'd be glad to scope a custom WMS for your facility — starting with a short requirements workshop, no commitment required.
